Step 2:
Click on
+Page
to design your
own homepage

+ Page

Step 3: Design your homepage. You can use LINKS by typing out text (very similar functions/tools to writing an email on Outlook) or by LINKING images (my favorite) by essentially creating “buttons”

In order to insert images into your page, you must upload them first.

Choose File

Choose the file from your desktop or folders.

Upload

Upload will insert the image onto your page.

Insert Content into the Page

[Links](#) [Files](#) [Images](#)

Click any image to embed the image in the page.

 [Upload a new image](#)

Folder

No file chosen

limit 50MB per file

 [Find images on flickr creative commons](#)

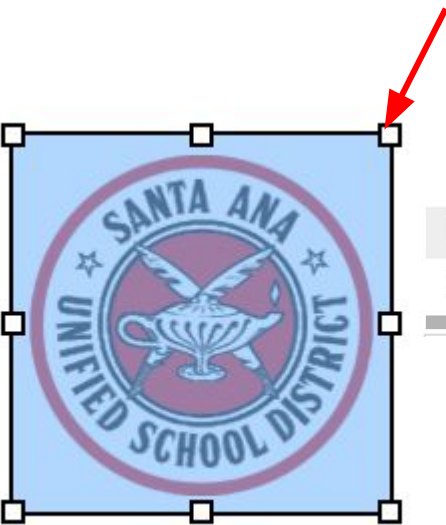

[8fcf2a40fcbabdda93127a837690bb76.jpg](#)

Step 3 continued... You can activate your images by making them “buttons” AKA hyperlinked images.

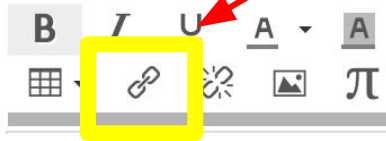

You can **change the size** of the images to make them more “button-like”

To **hyperlink an image**, simply **HIGHLIGHT** your image, and click on the “hyperlink” sign. Then, copy-paste the website or link you’d like it to link to. If you want to link your module page, just copy-paste the URL that you see when you’re at your course’s modules.

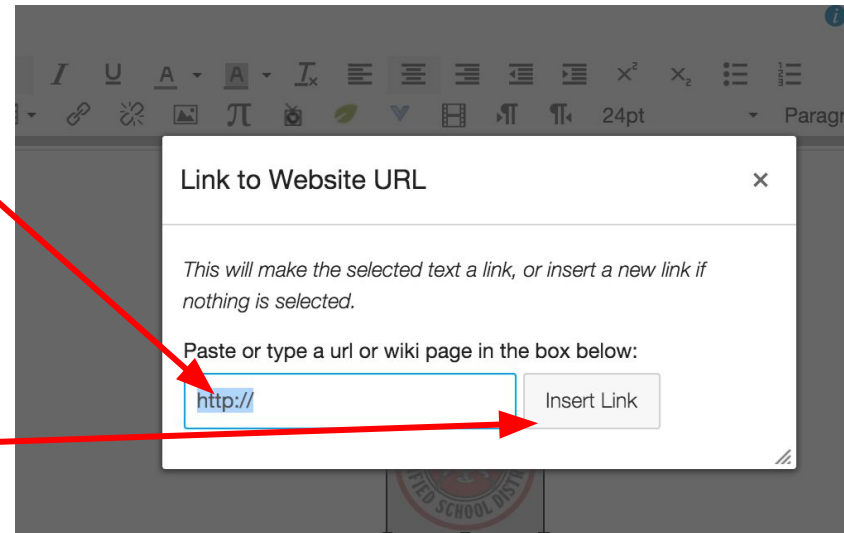

HIGHLIGHT

HYPERLINK

**PASTE
Website URL**

**Click INSERT
LINK**

Step 4:
Click on “Save & Publish”
If you do not publish your
page, you cannot set it as
your homepage.

MAKING BUTTONS! Here are a few resources/websites you can use.

<http://dabuttonfactory.com/> - This website lets you create buttons that are the same size and look professional

<http://piktochart.com/> - This website is for making infographs, and it's my favorite because it has beautiful fonts and cool icons.

You can also use word processing or presentation programs/apps to design your own buttons. Then, use the “screenshot” function.

My favorite method is the screen shot! (.png or .jpg)

On an **Apple Computer**, simply click all three of the following at the same time, and select the part you want to capture.
COMMAND-SHIFT-4

On a **Chromebook**:
It will save to your “FILES”
CTRL-SHIFT- 

On a **PC**: windows key, snipping tool, click on it, New, cross hairs- select the image you want to capture, and then it saves to your desktop
<http://www.digitaltrends.com/computing/how-to-take-a-screenshot-on-pc/>

You can also access pre-made buttons (PDF doc) on my teacher site. Just use the “screenshot” function to capture the buttons that you want to use.
